EDUCATION

B.S. Computer Science — Howard University, *2018*

M.S. Interactive Intelligence, Coursework Completed — Georgia Institute of Technology, *2020-2021*

CORE EXPERTISE

Research strategy · Mixed-method research · UX measurement · Behavioral analytics · AI evaluation · Customer experience measurement · Enterprise technology · SQL · HTML · CSS · Azure

PROFESSIONAL EXPERIENCE

Microsoft | UX Researcher II

March 2022 – Present | Remote, DC Metro

- **Lead multi-method research programs for Azure cloud event management experiences**, translating qualitative research, product telemetry, and experience metrics into insights that influence product strategy, customer experience, and incident-response workflows.
- **Lead evaluation of AI-generated model outputs**, developing evaluation criteria and research frameworks that informed model-weight adjustments and improved the evaluation of AI system performance.
- **Established UX measurement programs for Azure Portal**, defining KPI baselines and automated reporting mechanisms that enable continuous evaluation of user experience and product performance.
- Conduct research in a technically complex enterprise environment, **identifying high-friction workflows contributing to $34M in annual on-call engineering spend**

AT&T | Senior UX Researcher

January 2021 – March 2022 | Remote

- Led **multi-method research programs** spanning qualitative and evaluative methods to identify systemic employee experience opportunities and inform product and organizational strategy.
- Conducted ~15 cross-functional focus groups with leaders and employees, **synthesizing findings across diverse cohorts to identify recurring behavioral patterns and high-impact opportunities**.
- Developed customer journey maps and research frameworks that translated complex employee experiences into **prioritized opportunities for onboarding, career development, and product improvement**.
- Performed heuristic evaluations and usability testing for enterprise applications, providing recommendations that improved usability and encouraged earlier UX integration within product development.

AT&T | Software Engineer II

January 2019 – January 2021 | Middletown, NJ

- Developed enterprise software for a field technician platform serving **3,000+ employees**, gaining firsthand expertise in complex technical systems, operational workflows, and enterprise product development.
- Collaborated with UX, product management, and engineering teams to define requirements, validate technical feasibility, and iteratively improve user-centered solutions.

Microsoft | Computational Social Science Intern

May 2018 – September 2018 | New York, NY

- Conducted **large-scale quantitative behavioral research** analyzing 18+ months of Bing search data to identify patterns in evolving user information needs.
